

INTERNSHIP REPORT

ERPNext Implementation & Customization using the Frappe Framework

An Internship undertaken at Incirco Ventures LLP

Submitted to: School of Computer Science and Engineering, IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement for the degree of B.Tech CSE

Aradhya Khapre

Roll No: 2410030543

Batch: 2024–2028

Introduction & Organization Profile

Introduction

ERP systems integrate business processes such as inventory, sales, finance, purchasing and HR into a single platform. **ERPNext, built on the open-source Frappe Framework**, enables businesses to automate operations efficiently.

During my internship at Incirco Ventures LLP, I gained hands-on exposure to ERPNext and Frappe, working across the complete ERP implementation lifecycle — configuration, customization, testing, documentation and deployment support — while collaborating on real client projects.

Organization Profile — Incirco Ventures LLP

- Delhi-based commerce operations consulting firm (est. 2009), working with e-commerce and retail businesses on order management, inventory, marketplace integrations and ERP systems.
- **Positioning:** “Operators, not advisors” — built on hands-on brand experience (Shellocks, isEver).
- **Practice areas:** Commerce Operations Advisory, Operations Performance, ERP & Systems.
- **Partnerships:** Enterprise Solution Partner for EasyEcom and ERPNext; publishes an EasyEcom–ERPNext integration app on the Frappe marketplace.
- Also runs Incirco Academy, a training vertical for students and professionals.

Problem Statement & Project Objectives

Problem Statement

ERP implementation requires accurate customization and thorough testing so business processes run smoothly across varying client requirements. The internship supported ERPNext implementation, workflow validation, integration testing, documentation and QA — ensuring delivered solutions were reliable, business-specific and aligned with actual client workflows.

Project Objectives

1 Framework Fundamentals

Learn how enterprise frameworks work; understand the Frappe & ERPNext architecture.

2 ERP Implementation

Gain practical exposure to ERP implementation and customization.

3 Business Workflows

Learn workflows such as Purchase/Sales Orders, GRN, Inventory, Payroll, E-commerce.

4 Testing & QA

Develop skills in software testing, quality assurance and defect reporting.

5 Integration & Tools

Understand ERPNext–EasyEcom integration, version control and issue tracking.

6 Professional Skills

Improve problem-solving, documentation and analytical skills.

Scope of the Project & Technologies Used

Scope

Understanding how enterprise applications are developed, customized and maintained using Frappe & ERPNext — with practical exposure to client requirements, ERP customization, print format development, workflow testing, integration validation, documentation and software testing.

Technologies & Tools

ERPNext

Business processes: Sales, Purchase, Inventory, Payroll, HR

Frappe Framework

Custom DocTypes, roles, permissions, customization

Python

Backend customization & business logic

JavaScript / JSON

Client-side scripting in Frappe

HTML & CSS

Print formats & UI customization

EasyEcom Integration

Data sync & workflow validation

Git & GitHub

Repositories, issue tracking, bug fixes

WSL

Local Frappe development environment

VS Code / Frappe Cloud

Development, deployment & testing

System Architecture

ERPNext runs on the Frappe Framework: users interact via a browser, the framework handles logic, authentication and workflows, while data is stored in MariaDB and synced with EasyEcom via APIs.

Methodology

Work spanned real client projects — reinforcing enterprise application development, QA discipline and professional development workflow.

Outcomes & Key Takeaways

ERP Foundation

Built a strong practical foundation in enterprise application development using Frappe & ERPNext.

Testing & QA Skills

Gained hands-on experience in workflow testing, defect identification, and quality assurance.

Integration Understanding

Learned real-world third-party integration (ERPNext ↔ EasyEcom) and API-based data sync.

Professional Workflow

Practiced version control, issue tracking, documentation and client-facing collaboration.

The internship at Incirco Ventures LLP provided practical, industry-grade exposure to ERP implementation — experience that will be valuable for future projects and my professional career.
